

**PEOPLE'S BRAINS AND BODIES ARE NOT PROTECTED AGAINST ATTACKS BY  
ELECTROMAGNETIC WAVES AND NEUROTECHNOLOGIES**

**DEMONSTRATION at PLACE DU LUXEMBOURG, BRUSSELS**

**10. JUNE – 12:00 - noon**

Samuel Koslov, a leading personality of American Navy's project Pandora and researcher at the John Hopkins University, in his closing speech at the conference on Nonlinear Electrodynamics in Biological Systems in 1983, said that the conference had proven that the external electric fields can "become a key to the cellular control ... The implications, social, economic, and even military are enormous... it may be not less significant to the nation than the prospects that faced the physics community in 1939 when the long-time predicted fissionability of the nucleus was actually demonstrated". People did not really know what he was talking about until today, since much of it is classified and used in weapons research.

The human body is full of electrical and electromagnetic events and therefore can be controlled by electromagnetic radiation, which can have benign as well as harmful effects on its states. It may control even such events as is cell division <https://onlinelibrary.wiley.com/doi/abs/10.1002/bem.2250060107> or activity of neurons <https://nyaspubs.onlinelibrary.wiley.com/doi/10.1111/j.1749-6632.1975.tb35982.x>. The electromagnetic radiation can control single cells, as well as synchronized activity of masses of neurons in the brain.

**In 2021 the International Bioethics Committee (IBC) of UNESCO wrote: „External tools that may interfere with our decisions can call into question, or even challenge, an individual's free will, and consequently an individual's responsibilities. In this way, neurotechnology could affect freedom of thought, decision-making and action. Taken together, these could have a profound impact on justice systems and social organizations" <https://unesdoc.unesco.org/ark:/48223/pf0000378724> (pg. 36). At the end of the article IBC encourages its member states „to guarantee neurorights to their citizens" (pg.38) .**

The activity of human brains and bodies can be manipulated by electromagnetic waves, since electric currents are key factors of neural and muscle activity. As early as 1962 sounds were produced in human brains by microwaves pulsed in the frequencies of the nervous activity of the human auditory systems <https://journals.physiology.org/doi/abs/10.1152/jappl.1962.17.4.689> . In 2007, the Washington Post wrote: „in October 1994 at the Air Force laboratory... scientists were able to transmit sentences into the heads of human subjects, albeit with marginal intelligibility" [https://www.washingtonpost.com/wp-dyn/content/article/2007/01/10/AR2007011001399\\_pf.html](https://www.washingtonpost.com/wp-dyn/content/article/2007/01/10/AR2007011001399_pf.html) .

In 2020, the American Academy of Sciences wrote in the report on attacks of American diplomats in Cuba and China, well known as the Havana syndrome, that the most likely cause of their problems was directed pulsed radiofrequency waves. It is well known that these attacks are accompanied by artificially produced acoustic hallucinations. Those events suggest that pulsed microwaves are being used as a weapon already today. As a matter of fact, if human speech is converted into ultrasound and then into pulsed microwaves or extra- long electromagnetic waves, a human being will perceive them as his own thoughts.

On October 7, 2022, twenty three countries signed a document requiring "the Advisory Committee of the Human Rights Council (of the United Nations Organization) to prepare a study... on the impact, opportunities and challenges of neurotechnology with regard to the promotion and protection of all human rights". They made that request : "Bearing in mind that neurotechnology allows the connecting of the human brain directly to digital networks through devices and procedures that may be used, among other things, to access, monitor

and manipulate the neural system of the person" <https://documents-dds-ny.un.org/doc/UNDOC/LTD/G22/506/14/PDF/G2250614.pdf?OpenElement> <https://ecnl.org/news/un-hrc-51-new-and-emerging-technologies-and-human-rights-heart-new-resolutions-adopted>.

In September 2021, the Chilean Parliament approved a law guaranteeing Chilean citizens the rights to personal identity, free will and mental privacy <https://techxplore.com/news/2021-09-neurotechnology-advances-chile-neuro-rights.html>. Major world media did not report on this event, thus proving that technologies enabling remote control of human brains are actually classified <https://www.the-scientist.com/news-opinion/opinion-cell-phone-health-risk-40449>. Evidently it is now an urgent task for the world governments to follow the Chilean example and prove that they are not planning to transform their states into totalitarian states where the elite turn citizens into bio-robots, controlled by supercomputers. There are thousands of people worldwide, who complain about being exposed to deprivation of freedom of thought and torture by electromagnetic waves.

The current legislations protecting human rights must be updated to cover the new threats provided by advances in neurotechnology. They should secure the creation of teams capable of detecting electromagnetic or other types of attacks which produce electrical currents in the human brain or body, depriving people of their freedom of thought and privacy or injuring their bodies. Teams which governments should create, should also be able to find sources of harmful radiation and perpetrators of the neurotechnological attacks and should include representatives of human rights organizations, to ensure independence of those teams from powerful state agencies. Otherwise the future of mankind will have no respect for human rights and will be controlled by manipulators of human minds, emotions and bodily functions.

This manipulation could be executed by the secret services of foreign or home governments or even criminals, using directed pulsed microwaves, cell phone transmissions (the 5G radiation is planned to be omnipresent), or electrical grids to produce electromagnetic waves in the frequencies of human brains or by manipulating the ionosphere to produce extra-long electromagnetic waves in the brain frequencies like the U.S. radar system HAARP [https://www.europarl.europa.eu/doceo/document/A-4-1999-0005\\_EN.html](https://www.europarl.europa.eu/doceo/document/A-4-1999-0005_EN.html) (item 30) (operation of this facility was transferred from the United States Air Force to the University of Alaska in Fairbanks on Aug. 11, 2015) or by the Russian radar system SURA. China is actually building its own, more advanced system <https://www.scmp.com/news/china/science/article/2178214/china-and-russia-band-together-controversial-heating-experiments>.

In 1994 the Strategic Studies Institute at the U.S. Army War College wrote: "Potential or possible supporters of the insurgency around the world were identified using the comprehensive Interagency Integrated Database. These were categorized as "potential" or "active", with sophisticated personality simulations used to develop, tailor and focus psychological campaigns for each" <https://apps.dtic.mil/sti/pdfs/ADA283836.pdf> (pg. 24-25).

For more information on this subject see <https://www.svobodamysleni.cz/index.php/blog/> : „Psychoelectronic threat to democracy“ .
